

IT Helpdesk Standard Operating Procedure

IT Helpdesk & Support - Infovance Technologies Pvt. Ltd.

Document ID: IT-SOP-HD-2025-05	Version: 3.4	Effective: 01 April 2025
Owner: IT Helpdesk & Support	Classification: Internal	Next review: 31 March 2026

1. Purpose and Scope

This Standard Operating Procedure (SOP) defines how the IT Helpdesk at Infovance Technologies receives, prioritises, resolves and escalates technology support requests. It covers all employees across the Human Resources, Information Technology, Finance and Engineering departments at the Noida headquarters and remote workers. The goal is consistent, timely and courteous support that keeps colleagues productive while maintaining security and asset control.

2. How to Raise a Ticket

There are two approved channels for support requests. Using these channels ensures your request is tracked, prioritised and resolved within the defined service levels:

- Email:** Send a description of the issue to **helpdesk@infovance.com**. A ticket is created automatically and a reference number is returned.
- Self-Service Portal:** Raise a request through the **Jira Service Desk** portal at **servicedesk.infovance.com**, choosing the relevant request type and priority.

Please do not request support through direct personal messages to individual IT staff, as these requests are not tracked and cannot be guaranteed a response time.

3. Priority Levels and Response Targets

Each ticket is assigned a priority based on business impact and urgency. The Helpdesk uses the following matrix to set expectations for the first response:

Priority	Definition	Examples	Response Target
P1 - Critical	Major outage or security event affecting many users or a whole service	Server down, data breach, core system unavailable	1 hour
P2 - High	Significant impact to an individual or team; no workaround	Email down, VPN not working, cannot log in	4 hours
P3 - Medium	Moderate impact with a workaround available	Software installation, printer issue, access request	1 business day
P4 - Low	Minor impact or routine request	Hardware upgrade request, general query	3 business days

Response target is the time to first meaningful response, not necessarily full resolution. P1 incidents trigger immediate notification to the IT Manager and, where security is involved, the Information Security team.

4. Common Issues and Self-Service Solutions

Many issues can be resolved quickly by following the steps below before raising a ticket. If these do not resolve the problem, raise a ticket and include what you have already tried.

4.1 VPN Not Connecting

- Confirm you have a stable internet connection by opening any website.

- Open **Cisco AnyConnect** and ensure the gateway is set to **vpn.infovance.com**.
- Enter your corporate credentials and approve the multi-factor authentication prompt.
- If it fails, fully quit and reopen the client, then retry; restart the laptop if needed.
- Check that your password has not expired (see 4.2). If the issue persists, raise a **P2** ticket with a screenshot of the error.

4.2 Password Reset

- Go to the self-service password portal at **reset.infovance.com**.
- Verify your identity using the registered authenticator or recovery method.
- Choose a new password that meets policy (minimum 12 characters, complexity, not one of the last 8 used).
- Update the saved password on your devices and VPN client.
- If you are locked out and cannot self-serve, raise a **P2** ticket or call the Helpdesk line.

4.3 New Software Request

- Raise a **P3** request in the Jira Service Desk under 'Software Request'.
- Specify the software name, version, business justification and your manager.
- Manager approval is captured in the workflow; licensed or paid software also needs Finance sign-off.
- Once approved, IT installs the software remotely or schedules a session; unauthorised self-installation is not permitted.

4.4 Hardware Issue Reporting

- Note the asset tag on your device and a clear description of the fault.
- For total failure that stops work, raise a **P2** ticket; for non-blocking issues, raise a **P3/P4**.
- Attach photos of any physical damage or error messages.
- IT will triage for repair, replacement or a temporary loaner device.

5. Escalation Matrix

If a ticket is not progressing within its service level, or its impact increases, it is escalated as follows:

Level	Owner	When
L1	Helpdesk Support Engineer	First response, triage and common fixes
L2	Senior Support / Systems Engineer	Unresolved at L1 or specialised issue
L3	Infrastructure / Application Specialist	Complex, root-cause or server-side issues
Management	IT Manager	P1 incidents, SLA breaches, or user escalation

6. Asset Management

IT maintains a central asset register for all laptops, peripherals and licensed equipment. Key processes are:

- **Assignment:** Each device is tagged and recorded against the employee at issue; the employee acknowledges receipt in the asset system.
- **In-service:** Employees are responsible for the safe custody of assigned assets; loss or damage must be reported immediately.
- **Return on exit:** All assets must be returned to IT during the exit/clearance process. The IT clearance sign-off is mandatory for final settlement.
- Periodic asset audits are conducted to reconcile the register with devices in use.

7. Software License Management

IT centrally tracks software licences to ensure compliance and cost control. Licences are allocated per user or per device and reclaimed when no longer needed (for example, on role change or exit). Only software procured and

approved through IT may be installed on Company devices; use of unlicensed software exposes the Company to legal and security risk and is prohibited under the Information Security Policy. Renewal of critical licences is tracked in advance to avoid service interruption.

8. Remote Support Procedure

For issues that require IT to view or control your screen, remote support is provided using the approved tool, **TeamViewer**. The procedure is:

- The support engineer asks for your **TeamViewer ID** and the session passcode displayed on your screen.
- Share these only with a verified Helpdesk engineer working on your active ticket.
- You retain control and can observe all actions; the session ends when you close TeamViewer.
- Never share remote-access details with anyone claiming to be 'IT' outside of an open ticket — this is a common social-engineering tactic; report such attempts to security@infovance.com.

9. After-Hours Emergency Support

The Helpdesk operates during standard business hours (9:00 AM to 7:00 PM, Monday to Friday). For **P1 critical incidents** outside these hours — such as a major outage or a suspected security breach — contact the on-call IT emergency line at **+91-120-4XXXXXX (ext. 4111)**, monitored 24x7. Security incidents must also be reported to **security@infovance.com** within two hours of discovery, per the Information Security Policy.

10. Continuous Improvement

Ticket trends, recurring issues and satisfaction ratings are reviewed monthly to identify automation opportunities, knowledge-base additions and training needs. Employees are encouraged to rate resolved tickets and suggest improvements. For feedback on IT support, write to **helpdesk@infovance.com**. This SOP is reviewed annually and updated as tools and processes evolve.
